BIOGRAPHICAL SKETCH

Provide the following information for the Senior/key personnel and other significant contributors. Follow this format for each person. **DO NOT EXCEED FIVE PAGES.**

NAME: Liang, Bo

eRA COMMONS USER NAME (credential, e.g., agency login): STARITER

POSITION TITLE: Assistant Professor of Biochemistry, Tenure Track

EDUCATION/TRAINING (Begin with baccalaureate or other initial professional education, such as nursing,

include postdoctoral training and residency training if applicable. Add/delete rows as necessary.)

INSTITUTION AND LOCATION	DEGREE (if	Completion Date	FIELD OF STUDY
	applicable)	MM/YYYY	
University of Science and Technology of China,	B.S.	07/2004	Biological Science
Hefei, Anhui			
University of Science and Technology of China,	B.E.	07/2004	Computer Science
Hefei, Anhui			
Florida State University, Tallahassee, Florida	Ph.D.	08/2009	Molecular Biophysics
Harvard Medical School, Boston, Massachusetts	Postdoctoral Fellow	09/2016	Structural Cell Biology and Microbiology

A. Personal Statement

I have the motivation, expertise, leadership, and training essential to successfully complete the proposed research project. As a graduate student and two-time American Heart Association predoctoral fellow (0615182B & 0815118E) with Dr. Hong Li at Florida State University, and later as a postdoctoral fellow with Drs. Stephen Harrison and Sean Whelan at Harvard Medical School, I received outstanding training in structural biology, with specific expertise in cryo-electron microscopy (cryo-EM) and x-ray crystallography, as well as RNA biology and virology. My current research focuses on the structures and mechanisms of macromolecules with an emphasis on the RNA synthesis machinery of non-segmented negative-sense (NNS) RNA viruses, and neurobiological diseases-related proteins, including membrane receptors, ion channels, and neurodegenerative assemblies. I am also a team player. I am keen to exploit my expertise in structural biology (cryo-EM & crystallography) to elucidate the molecular machinery and associated mechanisms of traditionally challenging and exciting biological systems through collaboration.

I received a generous startup package and began my independent laboratory in the Biochemistry Department at Emory University School of Medicine in October 2016. Emory has purchased two state-of-the-art electron microscopes as part of my recruitment. Currently, I am the Co-Scientific Adviser of the Robert P. Apkarian Integrated Electron Microscopy Core (IEMC) at Emory. I have a dedicated mentoring committee that consists of established faculty Drs. Richard Kahn, Daniel Reines, Christine Dunham, and Anice Lowen at Emory. Drs. Stefan Sarafianos, Anita Corbett, David Steinhauer, Jeremy Boss (former interim chair), and Eric Sundberg (Chair) also provide critical feedback. Together, these colleagues have provided (and continue to provide) invaluable guidance on staffing and acquiring funding for my laboratory, prioritizing my research efforts, and ensuring that service and teaching commitments are appropriate for my independent career.

I have extensive experience in structural investigations on viral RNA polymerases and ribonucleoproteins. I successfully assembled and characterized multiple challenging macromolecular complexes. I established pipelines for mutagenesis and structural characterizations of enzymes to understand the catalytic mechanisms. My analysis of a multifunction viral RNA polymerase, the L protein of vesicular stomatitis virus (VSV), represented a landmark in the resolution revolution of cryo-EM. My current research focuses on the mechanisms of RNA polymerase of respiratory syncytial virus (RSV) with direct relevance to other negative-sense (-) RNA viruses. My expertise will facilitate the proposed investigation of the function and structure of positive-sense (+) SARS-CoV-2 RNA virus, with an emphasis on the machinery involved viral replication and propagation. My expertise and experiences make this project highly likely to succeed.

B. Positions and Honors

Positions and Employment

- 2002-2003 Undergraduate Research Assistant, Department of Chemistry, University of Science and Technology of China, Hefei
- 2002-2004 Undergraduate Research Assistant, Department of Computer Science, University of Science and Technology of China, Hefei
- 2002-2004 Undergraduate Research Assistant, Key Laboratory of Structural Biology (Chinese Academy of Science), School of Life Science, University of Science and Technology of China, Hefei
- 2004-2009 Graduate Research Assistant, Institute of Molecular Biophysics, Florida State University, Tallahassee, FL
- 2009 Teaching Assistant, Florida State University, Tallahassee, FL
- 2009-2016 Postdoctoral Research Fellow, Biological Chemistry and Molecular Pharmacology (BCMP), and Microbiology and Immunobiology (MBIB), Harvard Medical School, Boston, MA
- 2015 Teaching Assistant, Harvard Medical School, Boston, MA
- 2016- Assistant Professor of Biochemistry, Emory University School of Medicine, Atlanta, GA
- 2018- Co-Scientific Advisor, Robert P. Apkarian Integrated Electron Microscopy Core, Emory University, Atlanta, GA

Service and Experience

2005-2006	Treasurer, Stu	udents for the Effecti	e Communication of	f Science, Flori	da State University
-----------	----------------	------------------------	--------------------	------------------	---------------------

- 2006-2007 Vice President, Chinese Students and Scholars Association, Florida State University
- 2007-2008 President, Chinese Students and Scholars Association, Florida State University
- 2008-2009 Senior Consultant, Chinese Students and Scholars Association, Florida State University
- 2009 Graduate Course Lecturer, Florida State University
- 2010-2016 Governing Board, HMS/HSDM Postdoctoral Association, Harvard Medical School
- 2011-2014 Co-Chair, HMS/HSDM Postdoctoral Association, Harvard Medical School
- Judge, American Society for Biochemistry and Molecular Biology Research Poster Competition
- 2013-2014 Associate Editors-in-Chief, the Journal of Postdoctoral Research
- 2013-2016 Trainee Committee, Biological Chemistry and Molecular Pharmacology, Harvard Medical School
- 2014-2016 Secretary, Harvard Medical Postdoctoral Association, Harvard Medical School
- 2015 Developer, Three-dimensional Visualization Online Courses, Harvard Medical School
- 2017 Faculty Search Committee, Department of Biochemistry, Emory University School of Medicine
- 2017- Cryo-EM Scientist Search Committee, Electron Microscopy Core, Emory University
- 2017- Cryo-EM Planning Committee, Electron Microscopy Core, Emory University
- 2017- Editorial Board, Journal of Molecular Cell Biology
- 2017- Co-director, Biochemistry Departmental Seminar Program, Emory University School of Medicine
- 2017- Executive Committee, Microbiology and Molecular Genetics Graduate Program, Emory University
- 2017- Annual Graduate Course Lecturer, Virology (IBS 513), Emory University
- 2018- Annual Graduate Course Lecturer, Foundations of BCDB (BCDB 502), Emory University

Professional Memberships

- 2005- Member, The Biophysical Society
- 2006- Member, The RNA Society
- 2009- Member, The Protein Society
- 2018- Member, The American Heart Association
- 2018- Member, The SouthEast Consortium for Microscopy of MacroMolecular Machines (SECM4)
- 2019- Member, The Midwest Consortium for High Resolution Cryoelectron Microscopy
- 2019- Member, The American Society for Biochemistry and Molecular Biology
- 2019- Member, The American Society of Virology
- 2019- Member, The American Crystallographic Association
- 2019- Member, The Microscopy Society of America

<u> </u>	
2002	Excellent Undergraduate Research Project, University of Science and Technology of China
2002	Outstanding Student Scholarship, University of Science and Technology of China
2006	Predoctoral Fellowship, Florida/Puerto Rico Affiliate, American Heart Association
2008	Kasha Award, Florida State University
2008	Predoctoral Fellowship, Greater Southeast Affiliate, American Heart Association
2009	Chinese Government Award for Outstanding Self-financed Students Abroad, China Scholarship Council
2009	Protein Science Young Investigator Travel Grant, The Protein Society

C. Contributions to Science

- Illustrated the molecular basis of key assembly stages of a novel family of RNA-guided RNA modification enzyme. My interest in ribonucleoprotein (RNP) machinery began with my graduate studies in Professor Hong Li's laboratory, where I focused on box H/ACA RNPs that are essential for ribosome and spliceosome maturation. Box H/ACA RNPs utilize the same four proteins, Cbf5, Nop10, Gar1, and L7Ae, which are also core components of the telomerase, and a set of non-coding guide RNAs to capture ribosomal RNAs and snRNAs for chemical modification. My primary contribution was to illustrate the molecular basis of key assembly stages of the box H/ACA RNP assembly and function with a set of crystal structures, including one complex of Cbf5:Nop10:Gar1 (2.1 Å), one substrate-bound (2.87 Å) and one functional (2.35 Å) box H/ACA RNP. I also devised a fluorescence assay to dissect the accurate placement of the substrate RNA and analyzed the impact of chemical substitutions with biochemical and structural approaches and dynamic simulations. These findings, as papers cited below, collectively had a significant impact on understanding the multistep and multicomponent-mediated enzyme activity of the box H/ACA RNP.

- Determined the first structure of the multifunctional L protein of a non-segmented negative-strand RNA virus with cryo-EM. My subsequent work in the laboratories of Professors Stephen Harrison and Sean Whelan at Harvard Medical School directly visualized the atomic structure of the multifunctional RNA polymerase of vesicular stomatitis virus (VSV), a model non-segmented negative-sense (NNS) RNA virus. NNS RNA viruses are a group of viruses containing many significant human pathogens, including Ebola, rabies, and respiratory syncytial virus (RSV). The RNA synthesis by the RNA polymerase of these viruses is central to their life cycle. The RNA polymerase, constituted of the large protein (L) and the phosphoprotein (P), contains multiple distinct activities of RNA-dependent RNA polymerase, polyribonucleotidyl transferase, and RNA methyltransferase. I have successfully prepared and biochemically characterized the L complexes. My colleagues and I obtained the first architectures of L alone and its complexes using negative-stain EM. Importantly, I obtained a 3.8 Å cryo-EM structure of VSV L and performed the de novo model building of this 2109-residue polypeptide. Two significant contributions resulted from this work: 1) the determination of the first atomic structure of an asymmetric protein of less than 250 kDa using cryo-EM; 2) the first atomic view of the RNA polymerase of NNS RNA viruses. Further, I have successfully expressed and purified the L protein of rabies virus (RABV) and adapted an in vitro transcription assay from VSV to RABV.

- Illustrated the structure and regulation of the respiratory syncytial virus RNA synthesis machine. After being independent, I switched the focus to the structure and regulation of the RNA synthesis machine of RSV, a pathogenic NNS RNA virus. The L protein and an essential tetramer of P constitute the polymerase that acts on the viral genome, which is a complex of genomic RNA tightly coated by nucleoprotein (N). In some cases, additional viral proteins (VP30 in Ebola, and M2-1 in RSV) are necessary for full polymerase processivity. Thus far, (1) We adapted and set up the RSV RNA polymerization assay in the lab and provided new mechanistic insights into the initiation and elongation of RSV RNA synthesis. (2) We have determined a 3.67 Å cryo-EM structure of the apo RSV polymerase (L:P) complex. (3) We established a protocol to obtain RNA-free N protein (N⁰) and successfully demonstrated the in vitro trackable assembly of N with RNA into nucleocapsid-like particles (NCLPs) for in-depth mechanistic analyses. (4) We determined a 2.7 Å cocrystal structure of RSV M2-1 bound to a short RNA oligo and provided a structural basis for the recognition of RNA by M2-1.
