## **Supplemental Figure**

## Supplemental Figure 1: RFC structural progress

A) Structure of WT RFC with methotrexate bound (side-view) in the inward-open conformation (Wright & Fedor, et al., 2022), depicting the two domains that change conformation to provide alternating access to either side of the membrane.

- **B**) CryoEM map of RFC single mutant in the inward-occluded conformation. The loop closing cytoplasmic access is indicated by the red arrow. Pixel size 1.08A at ~3.2A resolution.
- ${f C}$ ) CryoEM map of the RFC triple mutant in the outward-open conformation. Pixel size 1.08A at ~5.3A resolution.
- **D-E**) Representative micrographs and 2D images from grid screening of RFC triple mutant with inhibitor (**D**) and anti-folate drug methotrexate (**E**) bound.
